- ▶ All-in-one Laboratory Spirometer
- ▶ Calibration Free Spirometry
- ▶ Embedded Ambient Condition Measurement
- ▶ 3D Child Incentive

Product Code: M915

PCD-PFT represents the state of the art performance in PC-based spirometry. It is an accurate and precise diagnostic spirometer with embedded ambient condition measuring sensors for automatic real-time BTPS correction.

PCD-PFT utilizes the comprehensive PCD-PFT software. The system is a perfect fit for doctors, who require a precise spirometer with highly customizable software, clear visualization of results and excellent networking capabilities. With disposable PCD-PFT flow transducers there is no need for bacterial filters or sterilization. This increases patient throughput and saves operational costs.

PCD-PFT

Freddy the Frog incentive

Freddy the Frog is the only 3D incentive animation in the world. Freddy captures the attention of the children and encourages maximum performance. This improves the quality of spirometry results.

Cost-efficient

The combination of hardware and software features and the use of PCD-PFT disposables increases patient throughput and makes the system cost-efficient.

Patient safety

Disposable PCD-PFT flow transducers provide security in infection control. No exhaled air gets into the pressure tube or the device. This reduces patient-to-patient cross-contamination and protects the spirometer.

Medikro Calibration Free Technology

No calibration needed due to continuous monitoring of ambient conditions to ensure automated and constant real-time calibration of the spirometry system.

Automated realtime BTPS correction

The temperature, pressure and humidity sensors track environmental conditions automatically and enable true realtime BTPS correction.

Optional Bronchial Provocation

Use readymade bronchial provocation protocols, create them from the existing protocols or generate completely new ones.

Consumables & Accessories

Primary Care Diagnostics, LLC
